

Success Rates

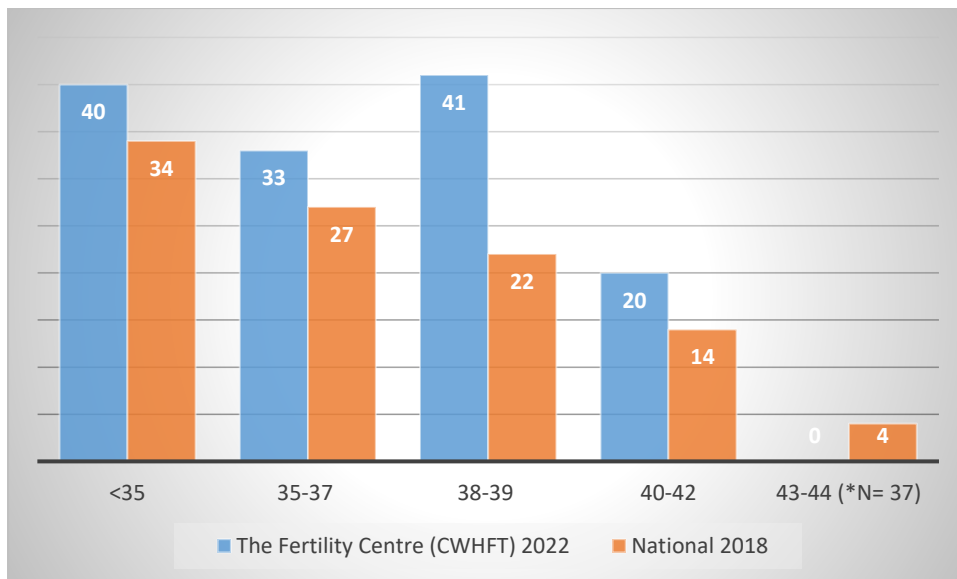

The success of a fertility clinic is determined not only by its pregnancy rate but also by the patient experience throughout treatment.

The Fertility Centre (Assisted Conception Unit as was) at Chelsea and Westminster Hospital NHS Foundation Trust (CWHFT) do not select patients based on expected positive outcome. We are also the main referral centre for oncology and transgender patients for cryopreservation (where patients by nature of treatment will not have a transfer). We also offer a special program for patients with very poor ovarian reserve (reproductive ageing and fertility preservation program) that may not be offered treatment elsewhere.

The information on success rates is of limited value in comparing centre and choosing where to seek treatment. Please visit www.hfea.gov.uk/choose-a-clinic/learn-about-choosing-a-clinic/ for further information.

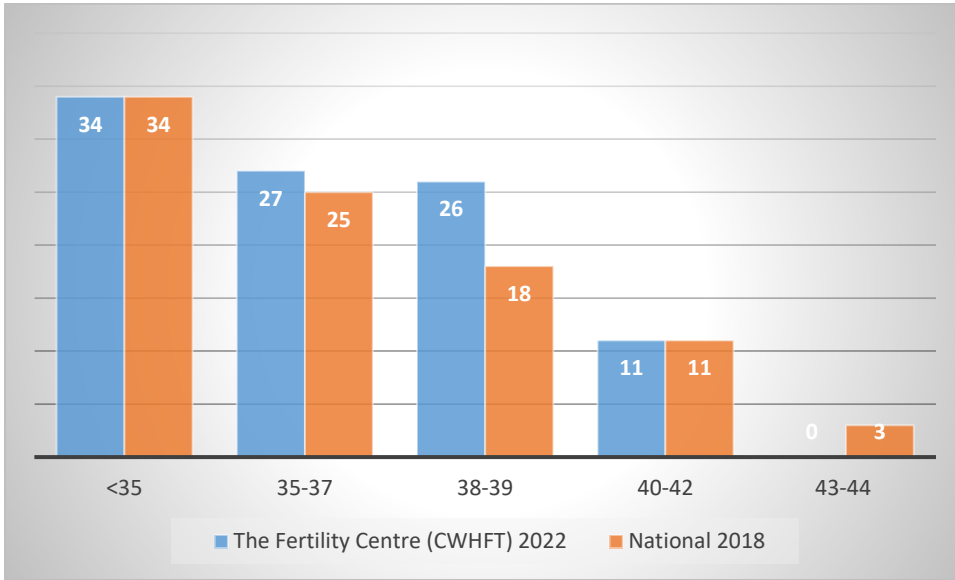

*NB: *Where groups are <50 cycles sample size is denoted by N*

2022 Live Birth Rate (LBR; %) per Treatment Cycle

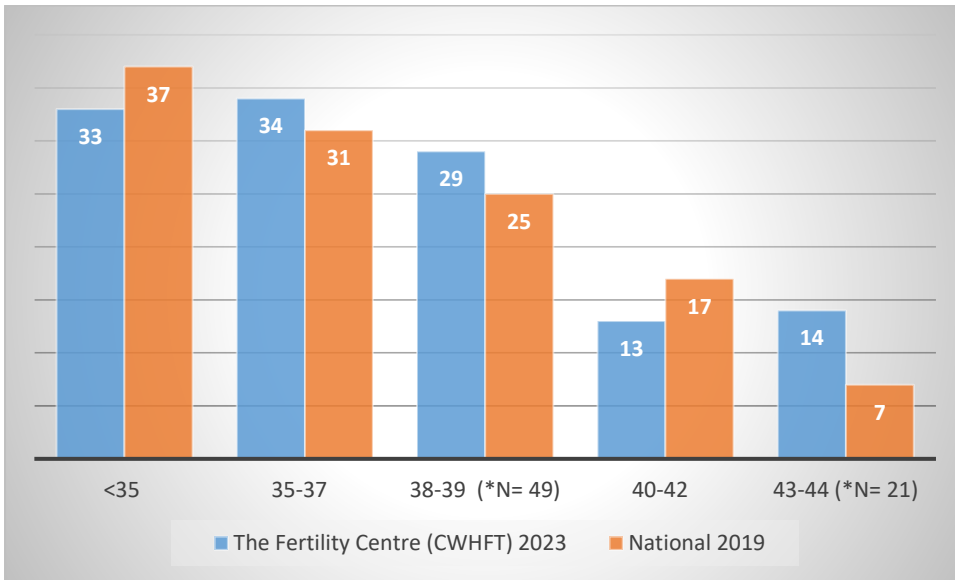

2022 LBR (%) per Embryo Transferred

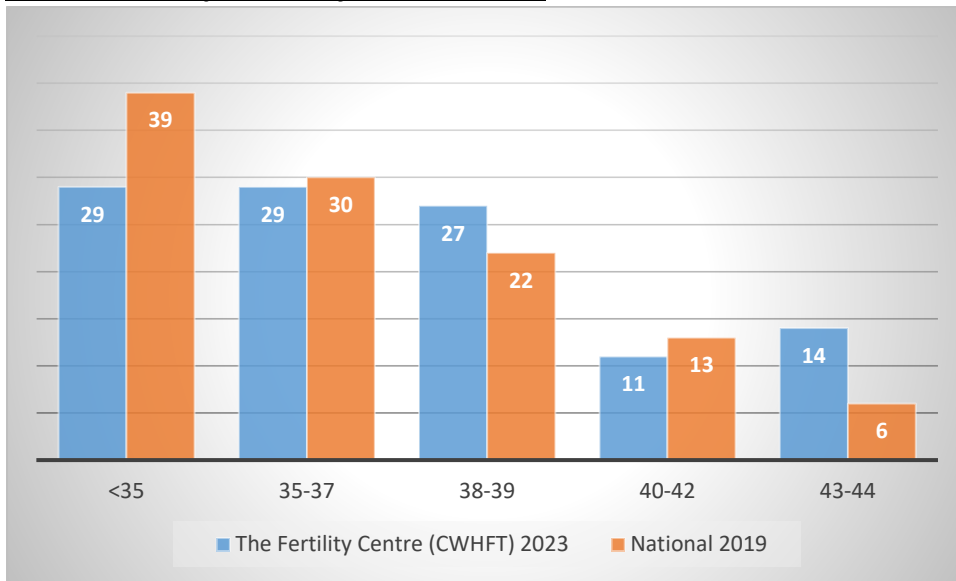

2023 Clinical Pregnancy Rate (CPR; %) per Treatment Cycle

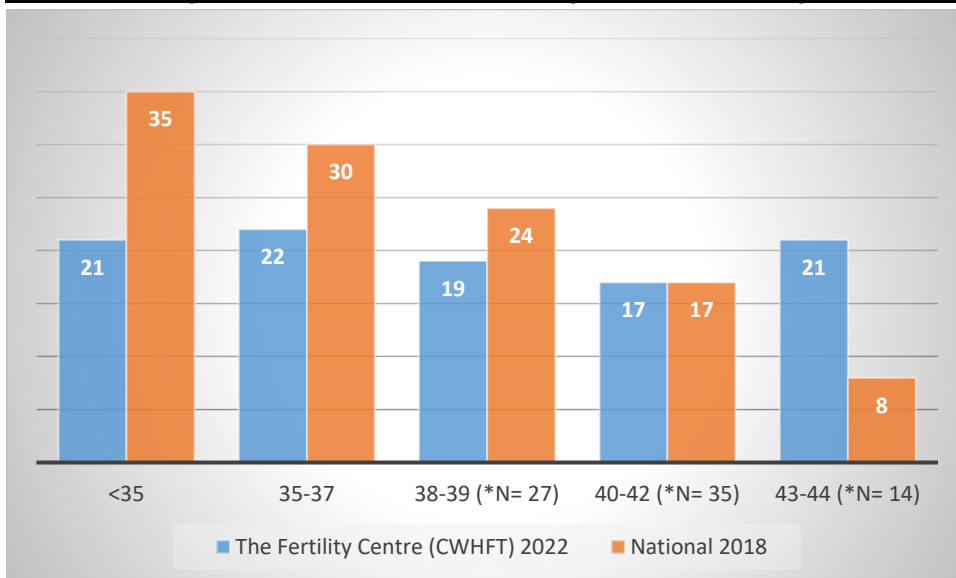

2023 CPR (%) per Embryo Transferred

Frozen Embryo Transfer - 2022 LBR (%) per treatment cycle started

Frozen Embryo Transfer – 2023 CPR (%) per treatment cycle started
